Ameri-Kleen Pedi-Safe and
en Vogue Colour Gels and Glitters

You already clean and disinfect your foot spas according to state regulations, but now you can further protect yourself and your clients with Pedi-Safe waterborne bacteria test kits from Ameri-Kleen Corporation. Use the kits daily to make sure that both your pipeless and piped foot spas are free of common infectious bacteria such as staphylococcus, pseudomonas and E. coli. Then, keep a log of the test results to ease your clients' minds and protect your business. Each Pedi-Safe package contains three sealed one-use test kits that are easy to use and provide results in less than 20 minutes—just dip, drop and wait. **For more information on Ameri-Kleen Corporation, circle 200 on the Reader Service Card, call 888/533-0738 or log on to www.amerispa.com.**

Offer clients expressive and durable nail designs with en Vogue Sculptured Nail Systems Colour Gels and Glitters. Combine the products with en Vogue Modeling Resins to create unique enhancements, or use them for overlays as a more durable alternative to nail lacquer. Colour Gels are available separately in a rainbow of 26 shades, and the 16 different Glitters are available separately or in Glitter Packs that include your choice of four Glitters, a jar of One Component and an empty mixing pot. Just mix, match and let your creativity shine to create one-of-a-kind designs for special occasions or everyday wear. **For more information on en Vogue, circle 201 on the Reader Service Card, call 888/659-5559 or log on to www.envoguenails.com.**

Ameri-Kleen Pedi-Safe

1 Open a Pedi-Safe foil pouch and remove all of the contents. Fill the spa basin with cool (not cold) water and circulate it for about 30 seconds.

2 Using the supplied dropper, extract a sample of the water from the basin by squeezing the bulb at the end and then releasing it to draw in enough water to completely fill the dropper.

3 Squeeze exactly one dropper of water into the provided vial, then gently swirl the vial, being careful not to touch the water sample. Let the water stand in the vial for seven minutes.

4 Place the test strip in the vial of water, making sure that the arrows on the strip are pointing down.

5 Wait 10 minutes before taking the strip out of the vial (do not disturb the strip or vial during this time). If one red line appears next to the "2" on the strip, proceed with the pedicure as usual.

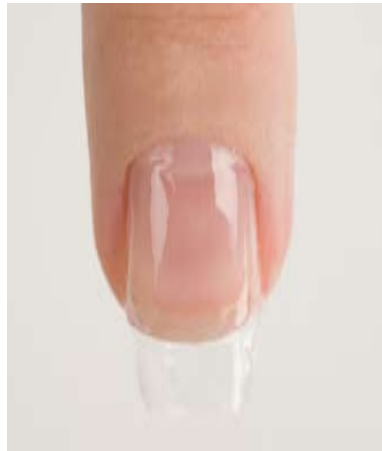

6 If two red lines appear on the strip—one next to the "1" and another next to the "2"—your water sample may contain dangerous bacteria levels. If no lines appear on the strip, repeat the procedure with a new test kit, starting at step one.

en Vogue Colour Gels and Glitters

1 Prep the nails as usual and apply forms. Brush a coat of Connector over the nails and cure them for two minutes under a UV light.

2 Next, apply a thin coat of Modeling Resin over the nails to the desired length on the form; cure for two minutes.

3 Mix 360 Hot Glitter with Clear Modeling Resin until it reaches a fairly thick density. Apply the glitter mixture to the free edges of the nails; cure for two minutes.

4 Fill in each nail plate up to the smile line with Sparkle Modeling Resin; cure for two minutes.

5 Apply a thicker coat of Clear en Vogue Modeling Resin over each nail and cure the nails for two minutes before wiping them with Prep & Clean. File, shape and buff the nails as needed.

6 Apply a coat of Pink Sealer over the nails and cure them for two minutes. Finish by wiping the nails with Prep & Clean.
