

Hot Looks to Warm Up the Season

Le Chat Nobility Soak Off Color Gels and Young Nails Glitters and Synergy Gels

Use Le Chat Nobility Soak Off Color Gels with the other products in the Nobility Soak Off line to create vibrant gel enhancements or as a more durable alternative to nail polish. The gels are formulated for smooth application and are available in a variety of colors that you can mix and match to achieve the perfect look for your client—from pink-and-whites to overlays to nail art. Unlike most gels, these products can be removed quickly and gently by simply soaking them in Le Chat Remover. **For more information on Le Chat, circle 200 on the Reader Service Card, call 800/553-2428 or log on to www.lechatnails.com.**

Combine Young Nails Glitters and Synergy Gels to create sparkling gel enhancements and trendy glitter gel toenails. First, apply a strong base with the technologically advanced products in the Synergy Gel system. Then, choose from 32 brilliant shades of Glitters to illuminate your client's look; they can even be mixed together to create an endless variety of original shades. The Glitters are also chemical-resistant, so with proper use, they can combine with gel products to form long-lasting looks. **For more information on Young Nails, circle 201 on the Reader Service Card, call 800/777-9170 or log on to www.youngnails.com.**

Le Chat Nobility Soak Off Color Gels

1 Prep the nails by pushing back the cuticles, gently removing the shine with a 180-grit file and cleansing the area with Gel Cleanser. Apply PrimeBond.

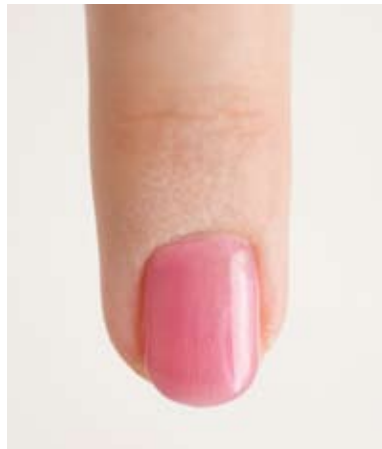

2 Apply a thin layer of Soak Off Clear Gel to each nail, avoiding the cuticles and capping the free edges. Cure the nails under a UV light for one minute.

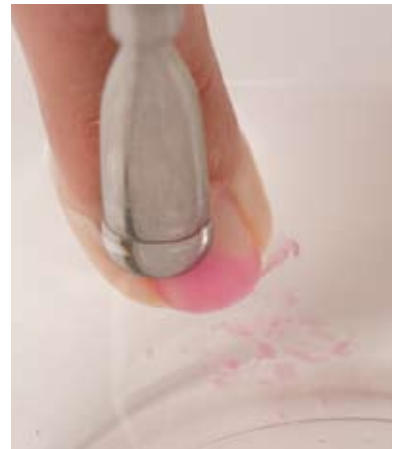

3 Apply a second layer of Soak Off Clear Gel and cure the nails under a UV light for three minutes. Then, use Gel Cleanser to remove the tacky residue from the surface of the nails.

4 Apply a thin coat of Soak Off Color Gel on each of the nails with a #4 nail brush, making sure to cap the free edges. Cure the nails under a UV light for three minutes. (Repeat this step if you desire a darker color.)

5 Apply Gel Top Coat, capping the free edges, and cure the nails for one minute. Remove the tacky layer with Gel Cleanser and apply another layer of Gel Top Coat. Cure the nails for two minutes and remove the final tacky layer with Gel Cleanser.

6 To remove the Soak Off Gel, simply soak the nails in the Remover for a few minutes. Once you see the gel breaking down, you may use a cuticle pusher to gently remove the product while the nails are still submerged in Remover.

Young Nails Glitters and Synergy Gels

1 Prep the toenails by pushing back the cuticles and gently removing the shine with a 180-grit file.

2 Use Swipe and a lint-free cotton square to wipe off any dust or oil from the nail plates. Apply Protein Bond to all 10 toenails.

3 Apply a thin layer of Base Synergy Gel to the toenails, and then generously sprinkle the chosen Glitters shade over the gel until each toenail is completely covered. Cure the toenails under a UV lamp for a minimum of 30 seconds.

4 Next, use a brush to remove any excess glitter. Apply a thin layer of Flex Synergy Gel over the toenails and cure them under a UV lamp for two minutes.

5 Without removing the tacky layer, apply Finish Gel to all toenails and cure them under a UV lamp for one minute.

6 After the toenails are completely cured, use a 150-grit zebra file to remove any rough edges and take off any extra length. Apply cuticle oil. ↓
